

**FACT ONE:**

You can prevent getting Covid.

**FACT TWO:**

There are 3 cures, virtually 100% effective:  
HCQ (Hydroxychloroquine), Ivermectin, and Budesonide.

**FACT THREE:**

With any of these treatments,  
Covid is far less dangerous than a bad flu.

**FACT FOUR:**

With any of these treatments, there is no reason for:  
lockdowns, masks, social distancing - or any vaccine.

**FACT FIVE:**

The treatments have long been known.

**WHAT TO DO?**

1. Ensure you have access to at least one medication.  
Get medical help (doctor, etc) to see what is locally possible.  
Ivermectin is almost universally available.
2. Ask yourself: What is going on, given these facts?  
Clearly something is very wrong.  
But that is not the focus here.
